DETAILED ACTION

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Morgan (US5574738).

With respect to claims 1-2, 4-9, and 11, Morgan shows in Fig. 1 and 4 a VCSEL comprising an n-type substrate 14, a first mirror 16, a first spacer 20, an active region 22, a second spacer 24, a second mirror 26, and an oxide insulating region 54.

With respect to claims 3 and 10, Morgan shows in Fig. 1 and 4 the insulating region is shaped as an annular ring.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morgan (US5574738) in view of the admitted prior art in this application. Morgan discloses all limitations of the claims except for the conduction layer, a cap layer, and an electrical contact. The prior art teaches in Fig. 1 a conduction layer 9, a cap layer 8, and an electrical contact 26. For the benefit of a VCSEL, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Morgan a conduction layer, a cap layer, and an electrical contact as taught by the prior art.

Claims 14-25 recite a method of forming a VCSEL. Since Morgan and the admitted prior art discloses the product, it is inherent a product by process for performing the method as recited in the claims. Therefore, claims 14-25 are also rejected.

Citation of The Pertinent References

The following US patents are being made of record, even though they were not relied upon in this Office action, for being similar in subject matter, and may be relied upon in any future Office Actions: 5056098 and 5328854.
